PRESSOSTATS FOR PRESSURE CONTROL UP TO 300 bar

USE

- -Pressostats for control and regulation of all fluids and gases except the propellent type.
- -Suitable for compression plants, boilers, tanks, autoclaves, ventilation plants, lubrication plants and in general whenever a pressure up to 300 bar must be controlled .
- -If used as control pressostats verify that max. pressure does not exceed max. sensitive element pressure. (See table)

INSTALLATION AND OPERATION

- -Stainless steel sensing element membrane.
- -Adjustable differential.
- -Male G 1/4" connection (17mm. key).

TECHNICAL FEATURES

- -Metallic frame.
- -Cover in antishock thermoplastic material.
- -PVC grommet for cable entry.

HOMOLOGATION AND STANDARDS

-Complies with CEI EN60947-5-1 standards

ELECTRICAL FEATURES

-Snap action SPDT microswitch, contacts in silver alloy.

-When pressure rises: 1-2 opens 1-4 closes

- * The differential must be deducted from the range value.
- In the case of fluid temperatures higher than the maximum allowed, connect a metallic spiral between the pressure switch and the pipe to facilitate heat dispersion.
- N.B. Transport and storage temperatures are equivalent to the max. allowable pressostat body temperature

1har = 100KPa
