

# Paddle Wheel Flow Meter

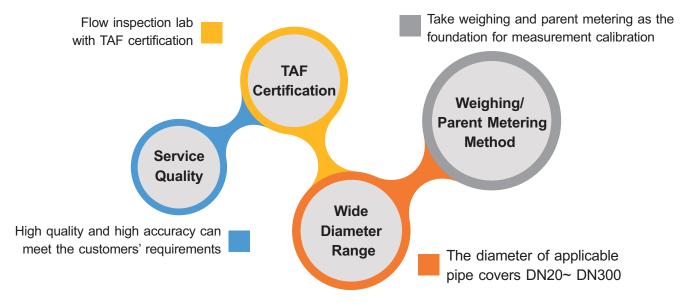

# FineTek Flow Lab

FineTek is the company who owns a Second Class flow test laboratory in Taiwan. With the most professional R&D team, FineTek develops various high precision flow meters and related parts. Moreover, FineTek is certificated and constantly validated by First Class accreditation organization, the Flow Laboratory of the National Measurement Laboratory, R.O.C (Center for Measurement Standards, ITRI), which is approved to guarantee the accuracy on the flow measurement in each delivery. The TAF flow laboratory of FineTek has been certificated and approved by Taiwan Accreditation Foundation (TAF) and conforms to the regulations of international organizations such as ILAC and APALC. It has the complete ability to conduct uncertainty testing and rating for flow test.

### EPR PADDLE WHEEL FLOW METER

#### **WORKING PRINCIPLE**

The Paddle Wheel Flow Meter measures the flow velocity by using the fluidic to drive the blade rotation, and calculates the flow rate based on the flow velocity. ERP1 series flow meter consists of flow transmitter and pipe fitting. The light and compact design allows the user to carry, install and operate it conveniently. The product is calibrated by professional flow test device, with the accuracy of K value reaching±3%. The measuring range is 0.3 ~10m/s, with high linearity. Display and non-display type are both available. The display type is built-in with accumulated flow storage device.

#### **FEATURES**

- Controlled by a microprocessor, with convenient operation and comprehensive functions.
- Power supply: 12-36 Vdc.
- Analog output: 4-20mA with 10% higher range as 4-21.6mA
- Simulated test output: 0-24 mA.
- Pulse output: Optical-coupling transistor output.
- Simulated frequency output: 0-300Hz
- Pure sensing non-display type is for convenient system integration
- LCM (Graphic 128x64 Dots) display type
- Built-in FRAM (Ferroelectric Random Access Memory) flash memory
- Easily separated from the sensor.
- LED indicator displays the alarm status.
- Upper limit settings of the analog output.
- Analog output flow rate and velocity filter settings: 0-40 segments.
- LED shows three back-lit modes, ON/OFF/In Operation.
- With RS485 communication.
- Parameter settings (K factor, pipe diameter, device ID, baudrate).
- Supports Traditional Chinese, Simplified Chinese, English, etc.

#### **APPLICATIONS**

The Paddle Wheel Flow Meter is applicable to neutral or corrosive liquids that are non-granular or non-viscous. It connects with an analog output and pulse output signal to form a monitoring system, which can display instantaneous flow and accumulated flow. Moreover, it can form a control circuit to adjust the valve or operate the switch.

X The detected medium must not contain any iron filings, particles which will attached the rotary paddle wheel and affect the accuracy and also cause damage. If there is possibility to have iron filings, particles in the process or pump operation, please install the magnet screen filters (please consider the Pressure loss) on upstream side for the minimum distance 15 times of pipe diameter.

- Food industry
- Beverage industry
- Water treatment industry
- Pharmaceutical industry
- Dyeing industry
- Chemical industry
- Semi-conductor industry
- PCB wet process control

## **CONTROL SYSTEM DIAGRAM**

# TRANSMITTER INSTALLATION

#### INTELLIGENT ALL-IN-ONE MODEL

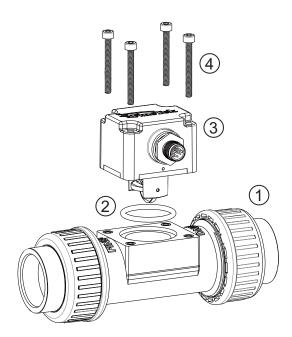

#### Installation steps

- 1. T-fitting of flow meter.
- 2. Place the O-shaped ring in the sealing tank, and unfold it naturally.
- 3. Make the blade holder face downward and go through the hole and O-shaped ring. Level and align it.
- 4. Fasten and align the 4 screws evenly with the \*Fastening torque:
  - Plastic Blade = 8~10kgf-cm(0.784~0.98N.m) Stainless Blade = 10~12kgf-cm(0.98~1.176N.m)
- 5. Point the M12 connector of the display towards you, and insert it into the slot. Level it horizontally and rotate it clockwise to the edge for alignment.
- 6. Fasten the 2 fixing screws. \*Fastening torque=6~8kgf-cm(0.588~0.784N.m)

\*Note: The above steps are for whole machine installation. To install the header only, please perform steps 5~6.

Please apply the fastening torque on the screws as required.

#### FLOW TRANSMITTER MODEL & PULSE OUTPUT MODEL

#### Installation steps

- 1. T-fitting of flow meter.
- 2. Place the O-shaped ring in the sealing tank, and unfold it naturally.
- 3. Make the blade of the transmitter face downward and go through the hole and O-shaped ring. Level and align it.
- 4. Fasten and align the 4 screws evenly.

\*Fastening torque:

Plastic Blade = 8~10kgf-cm(0.784~0.98N.m) Stainless Blade = 10~12kgf-cm(0.98~1.176N.m)

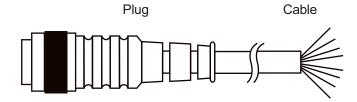

\*Note: Please apply the fastening torque on the screws as required.

# **WIRING**

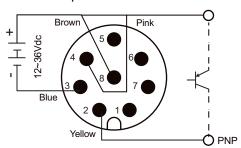

## Pulse output NPN

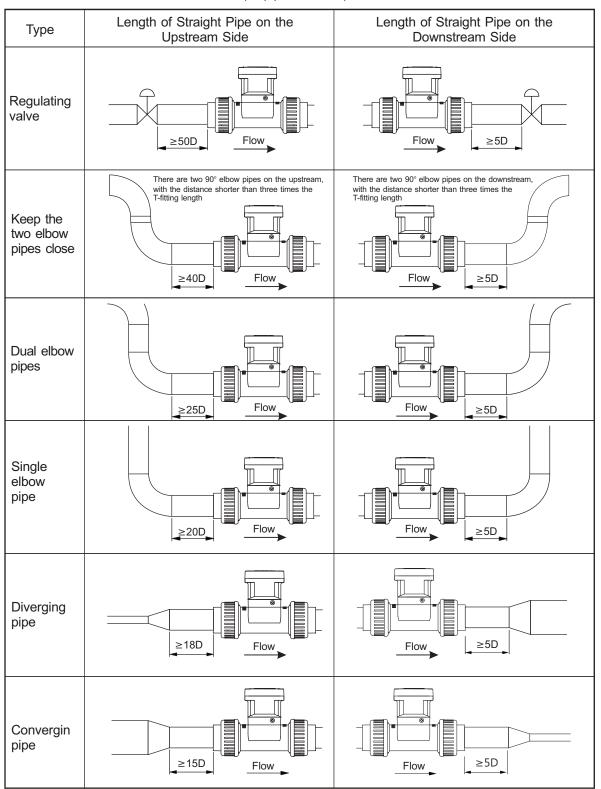

## Pulse output PNP

# REQUIREMENTS FOR STRAIGHT PIPE SECTION

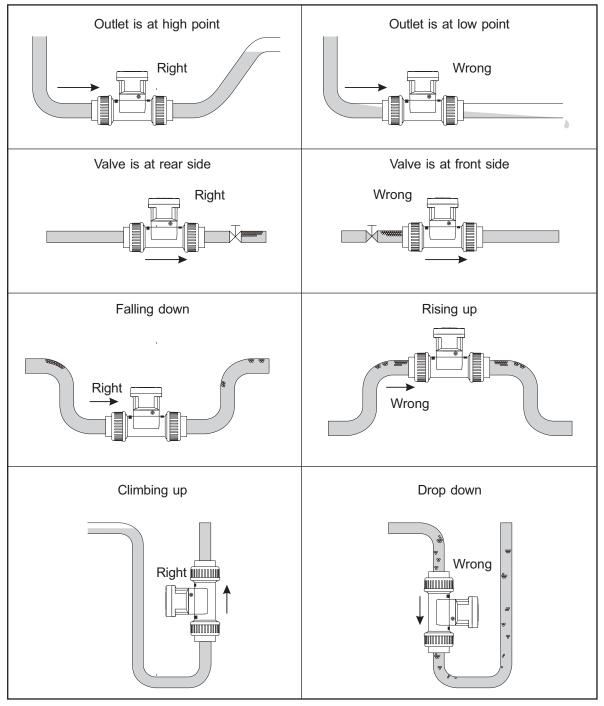

The straight pipe must be long enough on the upstream side and downstream side where the flow meter is installed. This can obtain an evenly distributed and stable flow field so as to guarantee the measuring accuracy. When installing the flow meter, please choose optimal distance based on the pipe dimension and field environment. Generally, the longer the section of the straight pipe is, the better. The table below lists the minimum distance based on the times of D(D=pipe diameter).

# **INSTALLATION REQUIREMENTS**

- 1. The flow meter must be in horizontal or vertical pipe.
- 2. Ensure the flow meter to keep a full pipe.
- 3. No air bulb or hole should be generated when getting close to the T-fitting area of the flow meter during the measurement. It will affect the accuracy of the flow measurement.

\*Note: When installing the flow meter on the horizontal pipe, the sensor blade must face downward. Appropriate material should be selected, and the specifications on pressure and temperature should be followed. Moreover, appropriate pipe diameter should be chosen based on the flow/velocity/diameter.
